OBJECTIVE

"I'm an IT graduate who is detail-oriented and motivated. I'm looking for an entry-level job in software development where I can use my knowledge of Python, web development, and machine learning to create new and useful solutions.."

EXPERIENCE

Fresher "I'm looking for an entry-level job in a company that is growing where I can use my technical skills, problem-solving skills, and desire to learn to help the company succeed."

EDUCATION

|---|---|
| <ul style="list-style-type: none">- Vijaya Institute of Technology for Women
B.Tech Information Technology<ul style="list-style-type: none">◦ CGPA: 7/10.0- Sri Chaitanya CO-OP Junior Kalasala
Intermediate (MPC)<ul style="list-style-type: none">◦ CGPA: 6.9 /10.0- Sri Chaitanya School
SSC<ul style="list-style-type: none">◦ CGPA: 7 /10.0 | <p>Nov 2021 - Apr 2025
Vijayawada, AP, India</p> <p>Jun 2019- May 2021
Vijayawada, AP, India</p> <p>May 2019
Vijayawada, AP,India</p> |
|---|---|

SKILLS

- **Programming Languages:** Python, C ,C++
- **Web Technologies:** HTML ,CSS
- **Database Systems:** MySQL
- **Data Science & Machine Learning:** Pandas, NumPy
- **Cloud Technologies:** Google Cloud Platform
- **DevOps & Version Control:** Git, GitHub
- **Other Tools & Technologies:** Jupyter, Google Colab

PROJECT

- | | |
|--|-----------------|
| <ul style="list-style-type: none">• "Blood Group Prediction Using Image Processing and Fingerprint-Based Deep Learning"
<i>Tools: Python, OpenCV, TensorFlow/Keras, Flask</i>
Developed a Flask-based web application for real-time blood group classification using deep learning techniques. Implemented a ResNet50-based Convolutional Neural Network (CNN) model with transfer learning to accurately predict eight blood groups (A+, A-, B+, B-, AB+, AB-, O+, O-) from blood smear images. Performed image preprocessing using OpenCV, including resizing, normalization, and data augmentation to improve model performance. Integrated fingerprint authentication to ensure secure patient identity verification and reduce mismatches in medical diagnostics. Achieved high classification accuracy with confidence scoring to support medical decision-making. The system was built using Python, Flask, HTML, CSS, and a SQL-based database for data management. | <p>May 2025</p> |
